Education

University of Washington – Paul G. Allen School of Computer Science & Engineering **Seattle, WA**

M.S. in Computer Science – Expected Jun 2028

B.S. with double major in Computer Science and Mathematics – Expected Jun 2027; GPA: 3.95/4.0

- **Awards:** William Lowell Putnam Mathematics Competition (top 200 nationwide), Phi Beta Kappa, Integration Bee Winner, Thomas J. Watson Memorial Scholarship recipient, USA Mathematics Olympiad (USAMO) Bronze Award
- **Coursework:** Scientific Computing, Probability and Statistics, Real Analysis, Group Theory, Data Structures, Database Management Systems, Software Design and Implementation, Algorithms, Artificial Intelligence, Machine Learning
- **Activities:** Chess Club, Algorithmic Trading Club (selective club sponsored by Jane Street and Trade Desk)

Experience

Susquehanna International Group **Bala Cynwyd, PA**

Quantitative Trading Intern *Jun 2026 - Aug 2026*

- Applied probability, statistics, and options pricing theory to mock trading simulations and forecasting exercises
- Shadowed index and options traders on the pods desk to analyze market-making strategies and trading decisions
- Passed the Securities Industry Essentials (SIE) exam

Paul G. Allen School of Computer Science & Engineering **Seattle, WA**

Teaching Assistant *Sep 2025 - Present*

- Teaching quiz sections for CSE 12X, an introductory Java programming course series serving over 1000 students
- Assisting students during office hours, providing feedback on students' projects, and improving course curriculum

MathPath **South Hadley, MA**

Counselor *Jun 2025 - Jul 2025*

- Supervised students aged 11-14 at a residential summer camp and planned recreational activities
- Assisted faculty in breakout courses such as Combinatorial Game Theory and Quadratic Reciprocity

Jovian Software Consulting LLC **Grand Rapids, MI**

Software Engineering Intern *Jun 2024 - Aug 2024*

- Wrote Bash scripts to automate build processes for a service-oriented architecture project in an Agile environment
- Developed unit tests using GoogleTest to validate logger functionality in a C++/CMake codebase
- Analyzed instrument data from spreadsheets and reported on patterns

Projects

Computer Science Theory Research

- Investigated Fourier analysis of boolean functions with a group of UW Allen School students
- Reviewed, analyzed, and suggested improvements to prior research regarding optimal communication complexity when determining whether boolean functions are linearly isomorphic using both random and deterministic algorithms

DubHacks - Cartners

- Developed a web app enabling roommates to coordinate grocery shopping trips, plan meals, and discover new recipes
- Integrated Gemini API to generate personalized recipes based on cuisine preferences and dietary restrictions
- Built frontend features using React to facilitate splitting of expenses and payment

TrueMath

- Worked with Elia Freedman on TrueMath, a large language model optimized to solve everyday math problems
- Wrote integration tests to verify the functionality of PowerOne, a versatile calculator used by the application

Husky Coding Project - Receipt Beyond

- Developed an application to utilize user receipt data to track long-term finances and spending habits
- Collaborated with a backend team to parse various receipt images and store the data in a remote semi-structured database using Google Firebase Realtime
- Improved functionality for accurately parsing varying date formats on receipts and storing in a consistent format

Skills

Languages: Python, Java, C/C++, JavaScript, HTML, SQL
Developer Tools: CMake, Git, Visual Studio Code, VIM
Libraries: GoogleTest, Matplotlib, NumPy, Pandas, PyTorch, TensorFlow
Other: Linux/Unix, LaTeX
